EDUCATION

University of Notre Dame | Notre Dame, IN

May 2027

Bachelor of Arts in Computer Science | Minors in History and Japanese

Relevant Coursework: Data Structures, Design and Analysis of Algorithms, Systems Programming, Operating Systems, Theory of Computing, Discrete Mathematics, Introduction to Artificial Intelligence, Programming Challenges, Computing Ethics

EXPERIENCE

Angie's Mexican Restaurant | Austin, TX

Web Developer

Summer 2026 – Present

- Designed, built, and deployed the restaurant's live bilingual (English/Spanish) website (angiesmexicanaustin.com), with continuous deployment from GitHub to Netlify
- Researched typography, menu layout, and navigation patterns before each design decision; restructured an 18-category menu with grouped mega-menu navigation and a scroll-aware sidebar
- Built a serverless contact form (Netlify Functions + Resend email API) that emails the owners directly, with API keys secured in environment variables; configured custom-domain DNS
- Wrote vanilla JavaScript UI components (image carousel with race-condition protection, live open/closed indicator); used Claude Code for large cross-file changes, verified with programmatic diffs

Waiter / Busser

Summers 2025 – 2026

- Served guests in a fast-paced, high-volume family restaurant while coordinating closely with kitchen and floor staff

University of Notre Dame | Notre Dame, IN

August 2024 – Present

Teaching Assistant, Principles of Computing

- Hold 5+ office hours per week supporting 40+ students through programming concepts and assignments
- Grade about 30 weekly homework assignments plus smaller in-class assignments across four semesters

DocPro Limited | Hong Kong

May 2024 – July 2024

Software Development Intern

- Collaborated with a small team to develop generative AI features for legal document drafting
- Led weekly meetings to brainstorm, prioritize, and implement new features that improved the user experience

PROJECTS

SportsPredictor | *Python, scikit-learn, SQLite, Linux, REST APIs*

2026 – Present

- Built an ML system that forecasts soccer matches in 7 leagues and tests for value against Kalshi and Polymarket prices
- Built the data pipeline that ingests fixtures, Elo ratings, and live market odds from 8 APIs and datasets into a SQLite database
- Trained calibrated Random Forest and Poisson regression models with scikit-learn; validated every change through a bootstrap hypothesis-testing framework and a holdout set kept out of training
- Deployed four cron-scheduled data collectors to a Linux cloud server (DigitalOcean), including a pregame job that captures odds 90, 30, and 5 minutes before kickoff
- Built data-integrity safeguards, including hash-verified database sync that aborts on divergence; documented model decisions and negative results in a decision log

LEADERSHIP AND ACTIVITIES

Video Game Club | University of Notre Dame

August 2023 – Present

President

- Lead a 600+ member club; run weekly board meetings and manage a budget of nearly \$10,000 per school year
- Secured \$30,000+ in sponsorships by building a professional relationship with the university's Information Technology Center
- Organized tournaments with hundreds of attendees and raised \$2,000+ through fundraising events for club projects

Transformational Leader Program | University of Notre Dame

August 2023 – Present

Member

- Helped integrate first-generation and underrepresented students into university life and tutored peers across multiple subjects

SKILLS

Programming: Python, JavaScript, C, C++, SQL, HTML/CSS, Bash

AI / Data: scikit-learn (Random Forest, Poisson regression, calibration), bootstrap hypothesis testing

Tools & Platforms: Git/GitHub, Linux/UNIX, Netlify, DigitalOcean, cron, REST APIs, SQLite

Design: User research, information architecture, responsive web design, bilingual/localized interfaces

Languages: English, Spanish, Japanese (elementary)
